MINING, BUSINESS AND STOCKS.

COLUMBUS OPENING ANOTHER ORE BODY

Shipping Ore Encountered South of Big Ore Body Opened Nearly Year Ago—Expect Improvement.

Another ore body parallel to the big one opened up a year ago in the Columbus Consolidated property at Alta has been encountered. Thus far the management has been unable to ascertain the possibilities of the ore body except that the width of the ore is gradually growing and gives every indication of making a giant body.

turned from the mine last night. Thus far he declares that the development work has been insufficient for him to make any definite statement. As far as the work has advanced, he asserts ore has opened up in splendid

the ore has opened up in splendid shape.

The most recent ore body is in a drift sent along the vein on the fourth level below the tunnel level and about 1,500 feet from the shaft. A drift was sent out to the west on the 400-foot level along one of the veins. It was this drift that struck an intersection and a place where rich ore was found 1,500 feet west of the shaft a year ago. In running this drift a cross vein was intersected. After the ore was struck the miners were directed to drift south on the vein encountered in drifting. About 100 feet south of the first drift a parallel fissure was encountered, and the management then directed that the drift run west along the strike of the fissure. Good values were found in the streak of ore that ran along the strike of the vein. The drift has gone about 100 feet, at all times finding good values. The last 16 feet has found the ore body increasing; in that distance it has run from three to seven feet wide. The ore body is increasing in size with each round of holes, and Manager Jacobson hopes to see a larger and richer ore body opened up than in the other dufits. The ore is of good shipping quality.

The drift sent south from the east

drifts. The ore is or good snipping quality.

The drift sent south from the east and west drift on the 400-foot level is expected to cut another ore body 100 feet ahead of the present face. It is known that at least five veins exist to the south of the present strike and running along with it. As soon as the last strike is opened out sufficiently the drift will be pushed to the south to crosscut the veins at greater depth than was allowed by the tunnel.

The property is not shipping as heavily as it did but is now sending down from 40 to 50 tons of ore a day. Only about four days out of the entire winter has shipping ceased.

TRADING ON EXCHANGE BETTER Prices Decline on Local Board-No Trading Tomorrow.

As tomorrow is Lincoln's birthday, there will be no trading on the local stock exchange. Such was the announcement of Caller Wasson this morning.

In spite of the spurt of trading on the local stock exchange this morning there was quite a decline in the prices of securities. The announcement of dividends by Colorade and Iron Blossom caused a decline this morning Evidently many of the stockholders were dissatisfied with the rate of income, although it looks most probable that the next quarterly dividend will be even higher than the present.

Colorado was lower today and after selling around 80 cents yesterday, went to 75 cents today. Iron Blossom went to 79 cents. Columbus Consolidated was not as strong as usual and was selling around 85 cents. Prince Consolidated reached a new low level of 80 cents. Every stock traded in today was weak. Sloux Consolidated was off, so was Mason Valley. Sliver King, Seven Troughs and Ohio Copper. The total number of shares disposed of this morning was 43,375, while the amount represented by the transactions was \$16,728.82.

On the curb market there were but few trades today. The sales made were 2,000 shares of Golden Chain at 40 cents; 500 shares of Opex at 68 cents, buyer 60 days; 1,000 shares of Greenhorn at 44 cents.

RAILROAD NEARS MASON.

Copper Belt Now Within 1,500 Feet of Nevada City.

Within 1,500 feet of reaching the station at Mason City, Nevada, the Nevada Copper Belt railroad, ran out of steel and building has been delayed. This is the second city to be reached by the railroad and the municipality has been making great preparation for "railroad day," which is to be celebrated in honor of the new road reaching the place.

The grading has been finished far past the city and on toward the west branch of Walker river where it will turn into Mason Valley and reach the Nevada-Douglas and Mason Valley mines. When nearing Mason City the contractor ran out of rails. Several carloads are on the road, and there are expected within a day or two.

LEASES BROOKLYN.

Quorum of Directors of Crown Point

Ouorum of Directors of Crown Point

Do Not Appear.

(Special to The News.)

Provo, Feb. 11.—At the meeting of the Brooklyn Mining company, held yesterday afternoon, Hyrum Straw of Springville was given a lease for 18 months on the Brooklyn. It is Mr. Straw's intention to work the south end of the property where large quantities of high grade ore were taken out years ago and where there is still much ore left, in the opinion of men who have been connected with the mine from the first.

A quorum of the Crown Point direc-

from the first.
A quorum of the Crown Point directors falled to appear and no meeting was held. For that reason no action could be taken on the matter of starting work on this property, which in the opinion of many will be done in the near future.

UTAH COPPER REPORT.

Shows Conditions of Boston Con. at

End of Year.

Boston, Mass., Feb. 11.—The Utah
Copper company reports its income
account for the year ending December
31, from which items are abstracted
as follows: Net price for copper, year's
sales, at an average of 12.915 cents,
\$6,683,321, total receipts, \$7,224,044;
dends paid, \$1,469,736; net surplus
after bond interest, \$690,061. Total
assets, including cost of property,
Garfield mill and power plant, Copperton plant, equipment, ore reserve,
water company, etc., \$14,083,315; surplus after deducting capital account,
first morigage bonds outstanding,
charges and accounts payable, minor
funds, etc., \$8,143,750,
Boston Consolidated reports con-

solidated balance sheets of New York, Salt Lake, Bingham and Garfield offices as of date Dec. 31: Assets, including acquisition of properties, purchasing claims, development, equipment, etc., \$4,530,673; current assets, \$29,-758; inventory, warehouses, smelter, etc., \$809,727; ore, etc., \$22,700. Total \$5,599,858. Liabilities, including capital stock, surplus Oct. 1, \$373,215; profits for last three months of year, accounts payable, United Metals, \$561,561; notes payable, \$107,000; deferred liabilities, reserves for freight, unclaimed checks, etc., grand total, \$5,599,858. This includes \$4,346,906 due Boston Consolidated Copper & Gold Mining company, which will be extinguished by delivery of 40,000 shares of Utah Copper stock.

WILL SELL

with the stockholders and officers of the company, who are local people. It is understood that two bids of \$60,000 each have been made for the Native Copper property in Alta. It is understood that the company has a five-foot vein of copper ore at the end of its 475-foot tunnel.

At the meeting of the directors of the Goldfield Consolidated Mining com-pany in New York on Feb. 24, it is probable that the regular dividend of the company will be increased from 30 cents a share to 50 cents.

Managing Director A. F. Holden and Asst. Managing Director Frederick Lyon of the United States Smelting, Refining and Mining company, who have been in the west for some time looking over the company's properties, leave for the east today.

leave for the east today.

According to word received yesterday from the Gold Circle Crown Mining company property in Gold Circle, the 1,000 foot tunnel has reached a change in formation which leads to the belief that the company is encountering the vein which was struck in the shaft. The tunnel is 100 feet below the bottom of the shaft and will have to be driven 100 feet more to get under it.

S. M. Stephouse has received a re-

S. M. Stenbouse has received a report on the assays taken from the Mud Springs property in California, owned by local people. The ore assayed was taken from the strike recently made while timbering and cleaning out the incline shaft. The assay returns were \$155.90 in gold and silver. This is twice as much as the company expected. Several gold experts and mining engineers will arrive at the property this week to make a thorough examination.

Dr. Agnes Wenzell, who has been

thorough examination.

Dr. Agnes Wenzell, who has been spending several years in this city and who has large mining interests in the Deep Creek country, returned, Thursday, from a trip to San Francisco. Miss M. Housekeeper, who is interested in Deep Creek with the physician, went on to Philadelphia, where she will remain some time with relatives. Miss Housekeeper's health has been poorly for the past year, and it is hoped the change will prove beneficial.

hoped the change will prove beneficial.

According to President Murray E.

King, who has just returned from the
Silver Island Coalition company property, No. 3 tunnel on the Emancipator
claim has encountered the shoot of
first class ore which crops on the surface. A crosscut driven six feet eastcriy found the body. Indications are
that it is at least 175 feet long. With
a little more work stoping can be
started. The company has just sent to
the market a 30-ton car of ore that
will average at least \$100 a ton.

RAIN A BOON FOR BOYS.

Every evening when the weather is stormy people who see the subway find some boys waiting with um-

St. Louis, Feb. 11.—Wool, unchanged.

stormy people who see the subway find some boys waiting with umbrellas at the head of the stairs at the Eighty-sixth street station. The boys offer their umbrellas to persons who have been unfortunate enough to be caught in the rain without protection. They never say anything about compensation, but it is understood that they never say anything about compensation, but it is understood that they never say anything about compensation, but it is understood that they never say anything about compensation, but it is understood that they never say anything about compensation, but it is understood that they never say anything about compensation, but it is understood that they never say anything about compensation, but it is understood that they never say anything about compensation, but it is understood that they never have stained the understood that they never have started some of the weather was very stormy just at the time when most people were arriving home from business. One boy made a little over \$\$ in four nights, and his partner with another umbrellas made over \$5.

With some of this money they purchased other umbrellas, and they have started some of their friends up in business to handle the custom which they cannot attend to themselves. Other boys have got on the scheme, and there are boys in the business now at other stations—New York Sun.

GERMAN UNIVERSITY LIBRARIES

American students who have used or attempted to use the libraries of German universities will appreciate the utter amazement and stubborn incredulity of the distinguished scholar from Berlin who while visiting recently the library of Columbia flagures for May were: Pork, 275 to 2.85; lard, 12.35 to 12.40; ribs, 11.12. The close was weak with May at 1.11.12. The close w

GERMAN UNIVERSITY LIBRARIES

American students who have used or attempted to use the librarles of German universities will appreciate the utter amazement and stubborn incredulity of the distinguished scholar from Berlin who while visiting recently the library of Columbia university was invited to ask for any book he chose. In less than one minute from the time he ordered the volume it was in his hands. The distinguished foreign visitor is convinced that the prompt delivery was a prearranged plan to deceive him. In some of the university towns of Germany a book ordered in the university library at 10 o'clock in the morning is not ready for delivery before 9 o'clock on the following day. The catalogue of the vast library of the University of Leipsic was a few years ago a stupendous collection of handwritten follos, some of which were centuries old, with writing illerible and almost obliterated and with no classification whatever except that all titles beginning with the letter A, for example, were written in one volume. The search for a title under such conditions was almost maddening to a hurried student. More than one American professor who had gone to Germany on leave of absence for special investigation requiring constant use of a great library has returned in disgust to America, affirming that although our American libraries are vastly inferior in literary treasures to those of Europe, the infinitely superior system of administration in America makes even our smaller libraries more valuable to the student and investigators than the uncharted and trackless wilderness of books in a great European library.

HE GOT OUT.

Of the culprits haled before a police magistrate in New York one Monday morning there was one, an Irishman, who had caused no end of trouble to the police the Saturday night preceding.

The magistrate regarded the prisoner with mingled curiosity and indignation. "So you're the man that gave the officers so much trouble?" his honor asked. "I understand that it took seven policemen to lock you up."

"Yis, your honor," responded the Celt, with a bread grin, "but it would take only wan to let me out."—Harper's Weekly,

COPPER STOCKS MADE GOOD GAINS

New York, Feb. 11.—The opening move-ment of prices of stocks today was slug-gish and irregular and dealings were ment of prices of stocks today was sluggish and irregular and dealings were light. RARE METAL THAT HAS REVOLUTIONIZED ELEC-TRIC LIGHTING

One October night in the year 1781 while Washington's cannon were de-manding the surrender of Cornwallis at Yorktown, a German scientist working in his little laboratory to the light from tallow candles, discovered a new and most unusual metal which he found impossible to melt in his crude charcoal furnace. He called the new metal tungsten, from the Swedish "tung" (heavy) and "ten" (stone) because the heavy ores ha come from Sweden. Little did the old

man know, as he worked away by candlelight to give his discovery to the world, that his find would some day, a hundred and twenty-five years later, completely revolutionize electric lighting.

Twenty-five years ago Thomas A. Edison produced the first successful incandescent electric lamp after other inventors had worked for nearly fitty years to perfect the device. The filaments for Edison's first lamps were made of carbonized strips of bamboo heated white hot in a vacuum globe by electricity. After 1894 carbonized cotton cellulose was used for the filaments and it seemed as though the lamp had surely reached perfection.

The filaments of incandescent electric lamps were made of carbon because no other material could be found which would withstand the intense heat. Every well-known metal was tried but melted before reaching the required temperatures. Then the inventors began to experiment with the more uncommon metals and again a German scientist took up the study of tungsten.

At first the great trouble was to secure pure tungsten. This difficulty was overcome with the aid of an electric furnace, but the product, in the form of a gray, metallic powder, proved so refractory that it could not be melted into ingots or drawn out into wire. An experimental filament was made by mixing the fine powder with a paste and squirting the mixture at hrough a bin wheb. This are as spider spine in which the same are as pider spine in which the form of a fine wire. With the melting point of tungsten so much higher than any other known metal it was possible to heat the filament to greater incandescence, producing more and better light with less waste of current in useless heat.

Then the electrical inventors awoke to the fact that the very substance they were seeking, that which Edson had scoured the world to find, lay under their hand all the time, and tungsten, useless and practically unknown for over a century, came into its own and began the wonderful task of revolutionizing incandescent electric lightling.
